- The number of the variables can likely be different within the same kind of data file across different years
- This document only includes the variables of SBEC data files (teacher-certification & test)
- The difference between both files (cert and initial_cert):
    1. sbec_certification_YYYY.dta: show every certification that a teacher receives; such as when a teacher receives a math cert one year and a science cert in another year;
    2. sbec_teacher_initial_cert_YYYY.dta: a teacher will on show up only the first time they ever receive their first initial certification; i.e. they will show up in this file if they initially receive a math cert, but will not show up if they receive additional certs after the initial cert
- This file would be updated when new variable(s) is added in the new data files
