

## Evaluation of the Texas Center for Educator Excellence (TXCEE) Teacher and School Leader Incentive Fund

Celeste Alexander, Pedro Reyes, & Sarah Stephens  
The University of Texas at Austin

April 2021

### What We Studied

Federal policy recognizes the importance of effective educators, particularly in high-needs schools. Research has shown that the most critical school-related factor that influences student learning and achievement is teacher quality (Hanushek, 2011). The Texas Center for Educator Excellence (TxCEE) aims to address the research-based and policy-based need to improve educator quality in Texas. TxCEE's mission is to equip educators to improve student achievement through the alignment of district resources, campus leadership training, and strategies to increase educator effectiveness. This report addresses the Teacher and School Leader Incentive Fund (TSL) program which impacts 4 districts including 62 high-need schools, over 2,500 professional staff, and over 39,000 students in Texas.

The data available through the Texas ERC provides comprehensive access to information across the educational pipeline, data from non-TSL districts for comparison, and the ability to determine the root causes for human capital and student achievement challenges in the participating high-need districts.

Consistent low-quality instruction leads to significantly lower achievement gains (Sanders & Rivers, 1996), which is of particular concern in high-needs schools as these schools have a higher percentage of ineffective teachers (Clotfelter, Ladd, & Vigdor, 2007; Goldhaber, Lavery, & Theobald, 2014). Yet, high-quality teachers “could substantially offset disadvantages associated with low socioeconomic background” (Rivkin et al., 2005, p.419). The lack of effective teachers in high-needs schools exacerbates the existing achievement gaps.

The Every Student Succeeds Act (ESSA), signed into law on December 10, 2015 to replace the Elementary and Secondary Education Act of 1965 (ESEA), continues the commitment to equal opportunity for all students. In particular, the ESSA emphasizes the need for high-need Title I schools to close achievement gaps and ensure that “low-income and minority children [...] are not served at disproportionate rates by ineffective, out-of-field, or inexperienced teachers” (Section 1111(g)(1)(B)). The federal policy recognizes the importance of effective educators, particularly in high-needs schools.

The movement of teachers from certification program to teaching positions, between districts, and away from education is also of interest, as frequent educator turnover has negative impacts on student learning (Levy, Fields, & Jablonski, 2006; Rowan, Correnti, & Miller, 2002) and can be very costly. Teacher experience and demographics have been shown to be strong predictors of retention.

## How We Analyzed the Data

Originally, the TSL grant included 4 districts with 62 high-need schools, over 2,500 professional staff, and over 39,000 students in Texas. These four districts are representative of Texas in that they include schools with a variety of sizes and locations, which will aid in the replication efforts across the state. Each of the districts face unique challenges such as high numbers of at-risk students, low achievement, and obstacles recruiting and retaining effective educators. Across the project 84.7% of students are economically disadvantaged, 37.7% are English Language Learners (ELLs), and the student mobility rate is 20.9%.

Descriptive statistics will be the primary method for this project. Most of the research questions are concerned with the relative numbers of teachers with varying characteristics. Propensity scores were utilized to establish comparison groups for the TSL campuses.

There are twelve locale options in the 2016-2017 National Center for Education Statistics (NCES) data that include cities and suburbs of various sizes as well as towns and rural districts of varying distances from urban centers. The four TSL districts are in four different locales; fringe rural district, fringe town, distant rural district, and a large suburb. For each of these four locales, four additional districts were chosen as a source of comparison and additional insight. All of the Texas districts in these locales were categorized into quartiles by the percentage of students who receive free or reduced-price lunch (FRPL). Within each FRPL quartile and locale, a district was chosen that had a similar size and racial/ethnic distribution to the TSL district in that locale. The racial/ethnic distribution in particular was difficult to match with the TSL districts for all of the quartiles as race tends to correlate with FRPL status. Thus, the “comparison” districts are not ideal sources for comparison, although they provide additional data about teacher recruitment, retention, and promotion that lend perspective to the data from the TSL districts.

*Table 1*

| District & Locale | FRPL Quartile | # of Students | %FRPL | %Black | %Hispanic |
|-------------------|---------------|---------------|-------|--------|-----------|
| A-Fringe Rural    | 3             | 1600          | 71    | 1      | 80        |
| B-Fringe Rural    | 4             | 700           | 98    | 0      | 98        |
| C-Fringe Rural    | 3             | 800           | 71    | 3      | 86        |
| D-Fringe Rural    | 2             | 1800          | 35    | 2      | 44        |
| E-Fringe Rural    | 1             | 800           | 25    | 0      | 20        |
| A-Fringe Town     | 3             | 6900          | 73    | 24     | 45        |
| B-Fringe Town     | 4             | 4700          | 82    | 8      | 60        |
| C-Fringe Town     | 3             | 4000          | 65    | 15     | 33        |
| D-Fringe Town     | 2             | 3200          | 41    | 10     | 32        |
| E-Fringe Town     | 1             | 5400          | 12    | 1      | 13        |
| A-Distant Rural   | 2             | 850           | 41    | 8      | 14        |
| B-Distant Rural   | 4             | 1000          | 76    | 14     | 25        |
| C-Distant Rural   | 3             | 900           | 61    | 17     | 24        |
| D-Distant Rural   | 2             | 810           | 44    | 6      | 13        |
| E-Distant Rural   | 1             | 700           | 24    | 1      | 11        |
| A-Large Suburb    | 4             | 32200         | 88    | 0      | 99        |
| B-Large Suburb    | 4             | 30000         | 94    | 0      | 100       |
| C-Large Suburb    | 3             | 23000         | 63    | 22     | 57        |
| D-Large Suburb    | 2             | 28000         | 48    | 16     | 49        |
| E-Large Suburb    | 1             | 38000         | 19    | 4      | 25        |

## What We Discovered

The following are three of the important findings of this evaluation that will be discussed:

1. The percent of new hires prepared through a traditional program has decreased over time in most of the sample districts.
2. Of the newly hired teachers, the proportion who are new to teaching increases with higher percentages of economic disadvantage determined by Free or Reduced-Price Lunch (FRPL) among the students.
3. Teachers in large suburban districts on average earn higher salaries than teachers in other geographic district categories. There is also less variation in average salary between the group of large suburban districts.

### **Newly Hired Teacher Preparation**

Teachers who are newly hired in a district are comprised of teachers who previously taught in other districts and first-time teachers. Newly hired teachers are analyzed in this report from 2008 until 2017 (2007 analysis is impossible without 2006 data).

In Texas there are two main teacher preparation pathways: traditional institutes of higher education (IHE) or alternative certification programs (ACP). Tables 2 - 5 show the distribution of preparation pathways attended by TSL district teachers as well as teachers from each set of TSL comparison districts by percent. The TSL district is always “A” and is highlighted in green. The comparison districts are “B-E” and the comparison district that fell within the same quartile for the proportion of students receiving free or reduced-price lunch as the TSL district in that locale is highlighted in blue.

*Table 2: Percentage of Newly Hired Teachers by Preparation Pathway- Fringe Rural Areas*

\* Cells with numbers less than five.

The group of districts located in fringe-rural areas appear to hire a larger percentage of teachers from IHE programs. The masked cells indicate that the number/percent is too small or low to report.

*Table 3: Percentage of Newly Hired Teachers by Preparation Pathway- Fringe Towns*

|               |       | 2008 | 2009 | 2010 | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 | 2017 |

\* Cells with numbers less than five.

Large Suburban districts tended to have less consistent patterns of percent of teachers hired from ACP and IHE programs. A-Large Suburb and B-Large Suburb consistently hired more ACP teachers. Whereas, C-Large Suburb, D-Large Suburb, and E-Large Suburb consistently hired more IHE teachers. Diversification in the state market of preparation options observed in prior research (Lincove et al., 2015) could partially explain this trend.

Overall, the percent of new hires prepared through a traditional program has decreased over time in most of the sample districts. Consistent across districts, there is a drop off in the number of newly hired teachers from the 2011 to 2012 school year, likely attributable to the large budget cuts to education passed during the 2011 legislative session. According to the snapshot of data provided by the tables above most districts have not returned to the pre-2011 levels of hiring, and larger districts appear slower to rebound.

### Newly Hired Teachers and Percentage FRPL

Table 6 shows the distribution of newly hired teachers by the proportion of students receiving FRPL.

Table 6: Percentage of Newly Hired Teachers

|                 | FRPL %  | 2012 | 2013 | 2014 | 2015 | 2016 | 2017 |

|                 | 75-100% | *    | *    | *    | *    | 95%  | *    |

\* Count <5 and or including complementary cell masking.

In terms of newly hired teachers, it is evident that within the larger districts (A-Large Suburb and A-Fringe Town), the bulk of new hires within high %FRPL schools are newly hired. A-Fringe Town's proportion of new-to-teaching teachers is similar to results for the large suburban districts observed.

On average, the proportion of newly hired teachers in a district varies substantially, especially for smaller districts. This is not necessarily surprising as it takes fewer teachers to influence this proportion in smaller districts. The newly hired teachers increases with higher percentages of economic disadvantage students at the campus at which a teacher teaches.

### Teacher Salaries

The tables and graphs below show changes in average teacher salaries over time grouped by district geographic locales. The salaries were computed by dividing the pay by the full-time equivalent (FTE) to weight the salary by the amount of time they spent teaching.

## Discussion/Policy Recommendations

Teachers in large suburban districts on average earn higher salaries than teachers in other geographic district categories. There is also less variation in average salary between the group of large suburban districts. Excluding large suburban districts, these graphs indicate that most teachers in districts shown here earned on average around \$40,000 in 2007, increasing to approximately \$50,000 in 2017.

1. The number of new hires prepared through a traditional program has decreased over time in most of the sample districts.
2. The percent of new hires prepared through a traditional program has decreased over time in most of the sample districts.
3. The number of newly hired teachers increases with higher percentages of economic disadvantage determined by Free or Reduced-Price Lunch (FRPL) among the students.
4. Teachers in large suburban districts on average earn higher salaries than teachers in other geographic district categories. There is also less variation in average salary between the group of large suburban districts.

The University of Texas at Austin ERC is a research center and P-20/Workforce Repository site which provides access to longitudinal, student-level data for scientific inquiry and policymaking purposes. Since its inception in 2008, the Texas ERC's goal is to bridge the gap between theory and policy by providing a cooperative research environment for study by both scholars and policy makers. As part of its mission, the ERC works with researchers, practitioners, state and federal agencies, and other policymakers to help inform upon critical issues relating to education today.
